as the ever changing skylines of cities all over the world show tall buildings are an increasingly important solution to accommodating growth more sustainably in today s urban areas whether it is residential a workplace or mixed use the tower is both a statement of intent and the defining image for the new global city the tall buildings reference book addresses all the issues of building tall from the procurement stage through the design and construction process to new technologies and the building s contribution to the urban habitat a case study section highlights the latest the most innovative the greenest and the most inspirational tall buildings being constructed today a team of over fifty experts in all aspects of building tall have contributed to the making of the tall buildings reference book creating an unparalleled source of information and inspiration for architects engineers and developers

this book presents ken yeang s work on the design of ecologically responsive skyscrapers and includes his essay on applying green design principles to the skyscraper typology as well as a preface by steve featherstone an introduction by david scott chairman of the council on tall buildings and urban habitat and a critique by professor ivor richards

urban and natural environments are often viewed as entirely separate entities human settlements as the domain of architects and planners and natural areas as untouched wilderness this dichotomy continues to drive decision making in subtle ways but with the mounting pressures of global climate change and declining biodiversity it is no longer viable new technologies are promising to provide renewable energy sources and greener designs but real change will require a deeper shift in values attitudes and perceptions a timely and important collection the natural city explores how to integrate the natural environment into healthy urban centres from philosophical religious socio political and planning perspectives recognizing the need to better link the humanities with public policy the natural city offers unique insights for the development of an alternative vision of urban life

fundamentals of integrated design for sustainable building offers an introduction to green building concepts as well as design approaches that reduce and can eventually eliminate the need for fossil fuel use in buildings while also conserving materials maximizing their efficiency protecting the indoor air from chemical intrusion and reducing the introduction of toxic materials into the environment it represents a necessary road map to the future designers builders and planners of a post carbon world from the foreword by ed mazria a rich sourcebook covering the breadth of environmental building fundamentals of integrated design for sustainable building introduces the student and practitioner to the history theory and technology of green building using an active learning approach the concepts of sustainable architecture are explained and reinforced through design problems research exercises study questions team projects and discussion topics chapters by specialists in the green movement round out this survey of all the important issues and developments that students and professionals need to know from history and philosophy to design technologies and practice this sweeping resource is sure to be referenced until worn out

drawing on the experience of several cities from different parts of the world this text provides a global perspective on the urbanization phenomenon and tall building development and examines their underlying logic design drivers contextual relationships and pitfalls

building a better future locally and globally is the topic of this user s guide written by a diverse collaborative of innovators worldchanging demonstrates that the means for making a difference lie all around

chapter 1 green architecture an overview chapter 2 definitions and operationalizations of green architecture chapter 3 brief history of green architecture chapter 4 green technologies energy generation chapter 5 green technologies energy retention chapter 6 green materials chapter 7 smart materials chapter 8 case studies bibliographyindexosman attmannis an architect and associate professorat the college of architecture and planning university of colorado

sustainability is a key issue as governments worldwide come under pressure to deliver a healthier environment they are starting to legislate for architects to produce greener design this title will provide a

vital overview for those looking for an introduction to green architecture on an international level as well as including projects the title will provide an essential outline of the green movement and the influence of key practitioners and thinkers upon architectural practice worldwide

sustain and develop the thirteenth volume from 306090 books investigates the contradictory yet potentially productive tension between our drive to develop and our growing realization that unregulated growth is eroding the natural ecology in which we live sustain and develop asks if it still possible to meet the needs of the present without compromising the ability of future generations to meet needs of their own how can developing countries undergoing rapid urbanization processes be brought actively into the debate how can developed countries with their own postindustrial landscapes and shrinking populations adapt to a redefined global economy sustain and develop provides a forum to investigate the tangle of interwoven issues and relationships that hold potential answers to these questions

underlying yeang's projects is a programme of research that focuses on the design of the skyscraper a design that derives from the recognized importance that climate has on finding energy efficient resources

with the aim of projecting alternative and sustainable forms of urbanism the book asks what are the key principles of an ecological urbanism how might they be organized and what role might design and planning play in the process while climate change sustainable architecture and green technologies have become increasingly topical issues surrounding the sustainability of the city are much less developed the premise of the book is that an ecological approach is urgently needed both as a remedial device for the contemporary city and an organizing principle for new cities ecological urbanism approaches the city without any one set of instruments and with a worldview that is fluid in scale and disciplinary approach design provides the synthetic key to connect ecology with an urbanism that is not in contradiction with its environment the book brings together design practitioners and theorists economists engineers artists policy makers environmental scientists and public health specialists with the goal of reaching a more robust understanding of ecological urbanism and what it might be in the future contributors include homi bhabha stefano boeri chuck hoberman rem koolhaas sanford kwinter bruno latour nina marie lister moshen mostafavi matthias schuler sissel tolaas charles waldheim

grounscrappers and subscrappers are the antithesis here of the environmentally responsive skyscrapers that are designed by ken yeang these are the eco medium rise buildings the roof vegetated underground buildings and the landscape driven masterplans produced by his firm hamzah yeang these building typologies have a different set of ecological design consequences on the natural man made environment not due to their intensity and sheer height as in the case of the skyscrapers but arising from their extensive foot prints and ground coverage through the many projects pro9fusely and densely illustrated here yeang demonstrates his innovative ideas towards handling the ecological design of such buildings and in particular expounds and further develops his ideas for creating new landscape bridges for linking ecologically disparate vegetated land he shows how the concept through its improved eco system connectivity can help further species migration interaction and enhance biodiversity for the locality the many schemes and designs also explore his ideas for the retention and the creation of new ecological corridors in the planning schemes and in some examples show how these can

integrate with the high rise built forms this book authored by ivor richards provides a valuable source of ideas and reference for architects town planners urban designers and those involved in master planning and environmental planning work seeking to design ecologically responsive low rise and medium rise buildings this book is a valuable companion to the other books on ken yeang s ex high rise buildings
